AUTHOR: Reshotka, Kh. S.

TITLE: Application of conformal mapping to the calculation of an isodynamic field

SOURCE: AN UkrRSR. Dopovidi, no. 2, 1964, 147-151

TOPIC TAGS: geomagnetism, ore prospecting, geophysical exploration

ABSTRACT: By applying conformal mapping with use of the method of trigonometric interpolation, a calculation was carried out of the characteristics of a field with a constant magnetic force for the combination of poles represented in Figure a. The shape and width of poles producing a constant magnetic force throughout the interpolar space were determined and the radius of the upper pole for the combination groove-circle producing a constant force was found. Orig. art. has 3 figures, 2 tables, and 17 formulas.

TITLE: Experimental checking of the results of field computation in an electro-magnetic separator taking into account the interaction of neighboring pole shoes

CITED SOURCE: Sb. nauchn. tr. Krivorozhsk. gornorudn. in-t, vy*p. 12, 1962, 296-304

TOPIC TAGS: electromagnetic separator, pole shoe

TRANSLATION: Theoretical and experimental studies on the magnetic field in a system consisting of an infinite number of equidistant similar pointed pole shoes and a flat magnet pole are described. Approximate formulas for the magnetic force are derived which are confirmed experimentally if the distance between poles is less than half of th tooth interval. Eleven illustrations. Bibliography with two titles. L. Ulmanis.

TITLE: Analysis of the Field in an Electromagnetic Separator With Allowance for the Mutual Effects of Adjacent Pole Terminals (Raschet polya v elektromagnitnom separatore s uchetom vzaimnogo vliyaniya sosednikh polyusnykh nakonechnikov)

PERIODICAL: Sb. tr. Krivorozhsk. gornorudn. in-t, 1956, Nr 5, pp 134-148

ABSTRACT: Earlier a study had been made of the two-dimensional magnetic field arising between the infinitely thin poles, either wedge-shaped or flat, of a magnet (Derkach, V. G., Gornyy zh., 1950, Nr 1). The present work is devoted to an investigation of the field existing with such a system of pointed poles. Fundamental, here, is the choice of a distance between the pointed poles at which the mutual influence of the respective poles would not lead to any noticeable reduction in the magnetic force exerted on a particle of ore. Equations are put forth for calculation of the mutual effects of like poles, of the magnetic force, and of the intensity of the field. It is found that the optimum radius of curvature is $r \approx 0.15 l$.

TITLE: On the generalized frequency criterion of evaluating the accuracy of image reproduction

PERIODICAL: "Tekhnika kino i televideniya, no. 4, 1963, 39 - 44

TEXT: This article was read at the All-Union Scientific Session of NTORIE im. A.S. Popov at Moscow in 1962. The authors give an evaluation on the information accuracy of reproduction of the image taking into account fluctuating interferences and present the results of calculating and measuring the generalized criterion for low-frame television systems. They evaluate the fluctuation effect of light quanta on the limit value of the criterion and come to the conclusion that it is expedient to carry out experiments for establishing direct connections between the generalized frequency criterion and the decodability of reproductions of image. There are 9 figures and 1 table.

Synthesis of pure selenium tetrachloride and its hydrolysis to selenium oxychloride. ~~Vodin and R. Ren~~
 (Masarykova Univ., Brno, Czech.). ~~Chem. Zvest. 57: 511-512~~
 64(1964).—A lab. process is described showing that by direct reaction of dry elementary Cl and dry elementary Se, and excluding even traces of humidity, 99.9% pure SeCl₄ can be obtained. SeCl₄ subjected to slow hydrolysis by introducing an inert gas (nitrogen) satd. with water vapor at room temp. gives well defined SeOCl₂. By measuring cond. of HCl soln. which is released during hydrolysis the change of SeCl₄ into SeOCl₂ can be checked.

Histological investigation of comedones and folliculitis in oil acne has been carried out.
It was stated that neither traumatization with iron particles nor irritation with
mineral oils are the primary cause of acne. According to the author acne is due to
hyperkeratosis which leads to obliteration of the glands. Pyogenic cocci from the skin
and mucous membranes as well as from the polluted oils may provoke folliculitis.

Title : Instrument for Detection of Visible and Infrared Radiations by
Means of a Platinum Bolometer.

Orig Pub: Ceskosl. casop. fys., 1956, 6, No 2, 209-220

Abstract: Description of characteristics and manufacture of bolometers made with electrolytically precipitated Pt. In the case of a typical bolometer measuring 10 x 0.15 mm the static sensitivity is 7.5 v W^{-1} with time constant $5.0 \cdot 10^{-3} \text{ sec}$. Also described is an amplifier with amplification factor $1.4 \cdot 10^5$, operating at frequency of 62.5 hertz, which makes it possible to measure radiations of $3 \cdot 10^{-10} \text{ W}$ with time constant of 20 seconds. The described bolometers are designed for measurement of radiations inflowing from monochromators.

ABSTRACT : At Cluj Experimental Station in the Rumanian People's
Republic, there were obtained by the method of individual
and mass selection, the clover lines Cluj-4 and Cluj-9
which in 1952-1956 gave an increase in the yield of green
roughage and hay of 12.1 and 10% respectively and of the
seeds - 54 and 61% in comparison with the original lines.

2102. Permeance of the air gap of a synchronous machine. J. Kizisek. *Elektrotech. Obz.*, 39 (No. 24) 525-36 (1950) in Czech.

The permeance of the air gap of synchronous machines with salient and non-salient poles is determined. After briefly describing the current method for graphical determination of the permeance of salient-pole machines and giving simplifying assumptions for such calculations, the permeance of an air gap of constant width is determined. The Laplace equation of a two-dimensional field of a machine in polar co-ordinates is derived and the radial and tangential components of this field on the stator surface are determined; a relation is also derived for the permeance of the n th space harmonic of the magnetic potential. The permeance in the air gap is also investigated in a system of curved co-ordinates, the Laplace equation for such a co-ordinate system is solved and a relation is obtained for the permeance of the n th harmonic of the magnetic potential. The permeance of an air gap of a salient-pole machine is also determined for various space harmonics of the magnetic potential. An example shows permeance curves for the various space harmonics of a magnetic field.

Title : Concerning the action of novocaine on the adrenoreactive systems of the peripheral veins

Periodical : Farm. i toks. 17, 14-17, Jul/Aug 54

Abstract : An investigation of the effect of adrenalin, ephedrin, and pituitrin on blood pressure in cats and rabbits after a preliminary intravenous injection of novocaine, revealed that novocaine did not suppress the adrenoreactive systems of the peripheral veins, but, on the contrary, increased the sensitivity of these systems to these three compounds. Nine Soviet references are cited.
